# ABOUT US

Genmex Enterprises is an expert in E-PTFE for your industrial sealing needs and surpassing corrosion barriers.

Largest Independent trader of Fluoropolymer raw material resins (PTFE , FEP, PFA, PVDF, ETFE) in India.

Manufacturer and exporter of semi finished and finished fluoropolymer products (PTFE, FEP , PFA) having more than 12 years of experience.

All the products are of standard quality and passed the FDA , ROHS , CE, ISO & SGS certification to meet industry needs and design. We have a good reputation in European, USA, Middle East & Asian markets.

We offer E-PTFE Sheets, Gaskets, Tape, PTFE Semi finished and finished products, PTFE Medical & Lined Products , Fluoropolymer raw materials for industries across India and Asia.

The Company is founded by Mr. Akshat Jain (CEO) B.tech in Mechanical and Automation Engineering bringing Technical knowledge and development of new products in the field of Fluoropolymers.

Backed my Expertise Mr. Balbir Jain (Bali) bringing 35 years of experience in the Field of Fluoropolymers and is the Consultant on the Board of Genmex.

He is an Engineer from MIT , USA and bring new innovation and technology to cater USA and overseas market.

## **MEDICAL**

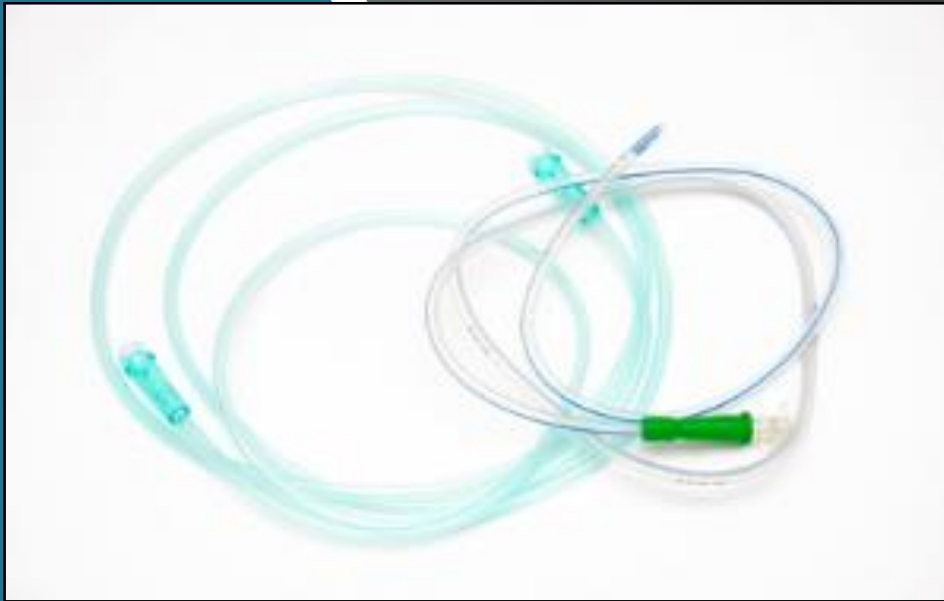

In the domestic and foreign medical markets, PTFE products have been more than 30 years old. In fact, PTFE products have been popularized in all fields of surgery, and it is a world leader in the production of the graft due to its chemically stable properties. Products Offered: PTFE Dental Floss, Infusion Set, Surgical Suture, Cardiac Occluder.

# MEDICAL

## 1.TUBE

Romsons Ryle's tube is suitable for nasogastric introduction, for nutritional purposes or aspiration of intestinal secretions. Distal end is coned with corrosion resistant stainless steel balls sealed into the tube. Manufactured from medical grade Polymer. The tube is super smooth, low friction, frozen surface which encourages a non-traumatic intubation.

## 2. DENTAL FLOSS

PTFE dental floss is a kind of safe, nontoxic and chemically stable oral product. Compared with dental floss of other materials, PTFE is the one of non-rejection and non-sensitization. With smooth, it can effectively reduce the friction between dental floss and gums, effectively reduce the friction between dental floss and gums, effectively preventing gingivitis and periodontitis and other diseases, and is less liable to cause gum infection. Using PTFE floss can effectively remove the food residue in the diastema and clean the areas beyond the reach of toothbrush.

- 100% PTFE
- Excellent abrasion resistance, fluff free, split free.
- Stable chemical properties, acid and alkali resistance
- Non-sensitizing materials, no gingival infection and inflammation.

## 2. INFUSION SET

EPTFE membrane for infusion set is a kind of hydrophobic breathable microporous membrane, which can effectively block external bacteria intrusion while balancing the air pressure inside and outside the infusion bottle, truly achieving the goal of safety and sterility.

## 3. SURGICAL SUTURE

The PTFE surgical suture is a kind of safe, antibacterial material of non-rejection with smooth surface and stable chemical properties. It is not vulnerable to be degraded or weakened by tissue enzymes, has slight tissue reaction, and can maintain its intensity in the body for a long time.

## 4. CARDIAC OCCLUDE

It is a kind of PTFE medical product, which is implantable medical product of safety and non-reject with microporous reticular used as cardiac occlude the patent ductus arteriosus occluder is a mushroom-shaped device woven from superelastic nitinol with polymer biofilm embedded inside. The reticular structure is filled with polyester spunbond and PTFE.
